PF-08 Ultimate King Pin Lock

The first and still the best conical king pin lock

Highly renowned, loved by those who own it, dreaded by thieves everywhere.

Built to the highest standards, and with its high security design, wide conical shape and tight screwed-on fit, these locks remain the best way to immobilize a king pin trailer.

They can be used alone or combined with a glad hand lock, wheel lock or landing gear leg lock.

Included parts:

- 1 x King Pin Lock body with reflective hang tag
- 1 x Medeco core
- 2 x Medeco keys
- 1 x Allen Key

Important tips :

- If you are experiencing any difficulty with the cylinder and/or king pin lock, **DON'T INSTALL IT**, contact us instead. This could avoid a costly locksmith visit.
- You shouldn't turn the internal master screw until it falls out. But if you do, reinstall it the same way it fell out, by the inside. Never attempt to reinstall the internal master screw by the outside.
- Avoid overtightening the internal master set screw. When you feel the screw hit the king pin, **stop tightening.**
- Only use approved lubricants like **Medeco Key Lube**, **Synco Superlube** or **Prolab PL-100**. Other products may permanently damage the cylinder.

Great tip from one of our customers:

Keep your King Pin-Lock clean by putting it in a plastic bag before installing it onto your trailer!

Installation Instructions :

1. Before going under the trailer, remove cylinder, and use allen key to turn master screw counter-clockwise

2. Using handle and allen key, lift king pin lock onto the trailer's king pin.

3. Screw the king pin lock on by turning screw clockwise. Make sure the handle is towards the back of the trailer

4. Remove allen key, insert Medeco cylinder. Make sure the cylinder is oriented correctly.

Installation complete!
